

# Vincent Phung

Toronto, Canada | vincent.phung05@gmail.com | [GitHub](#) | [LinkedIn](#) | [vincentphung.me](#)

---

## SKILLS

Languages: JavaScript, HTML5, CSS3, Java, Python, C, MATLAB, Arduino

Frameworks and Libraries: Express.js, Bootstrap 4

Databases: MongoDB, Oracle

Technologies and Tools: Node.js, Git, Git Bash, VS Code, Postman, EJS

---

## EDUCATION

Ryerson University, Toronto

B.E. in Computer Engineering, Software Option

September 2018 – Present

### Relevant Courses

Object Oriented Analysis and Design, Algorithms and Data Structures, Discrete Mathematics, and Database Systems

Dean's List (2019-2020)

---

## PROJECTS

Pokédex. (Node.js, Express.js, MongoDB, EJS, JS/HTML5/CSS3) | <https://github.com/VincentP05/MyPoked3x>

- Developed a web application that allows the user to look up Pokémon information
- Incorporated Node.js and Express.js to handle HTTP requests, routing endpoints, and data processing
- Implemented MongoDB Atlas database to store Pokémon information from PokéAPI on cloud storage
- Utilized the Web Speech API for speech recognition and speech synthesis

MiWeather. (JS/HTML5/CSS3, Bootstrap 4) | <https://github.com/VincentP05/MiWeather>

- Developed a web application that displays a 5-day weather forecast
- Used the fetch API to request data from the OpenWeatherMap API and the Google Geocoding API
- Designed user interface with Bootstrap 4 and CSS3

Banking System. (Java)

- Created a banking system with a GUI using JavaFX
- Implement OOP concepts such as polymorphism, architected through UML Class Diagrams
- Incorporated the State Design Pattern to give structure to the application
- Utilized Java's built in file library to store user data, by reading and writing into local text files

GitHub Portfolio Finder. (JS/HTML5/CSS3, Bootstrap 4) | <https://github.com/VincentP05/GitHubFinder>

- Developed a web application that allows users to search through GitHub users and view their recent public repositories
- Utilized the fetch API to request user's data from the GitHub API
- Used the Document Object Model to dynamically update the page as user inputs text

Random Maze Generator. (Python)

- Developed a random maze generator using the pygame library
- Created an algorithm that generates a maze on an  $n \times n$  grid

Snake. (JS/HTML5/CSS3) | <https://github.com/VincentP05/Snake>

- Created a browser-side Snake game, that stores gameplay data in local storage
- Utilized HTML canvas, to render game
